Average Industry Experience: 21 Years; Average RBA Experience: 7 Years

RBA's Unique Multi-Asset Investment Strategy

Investment Approach

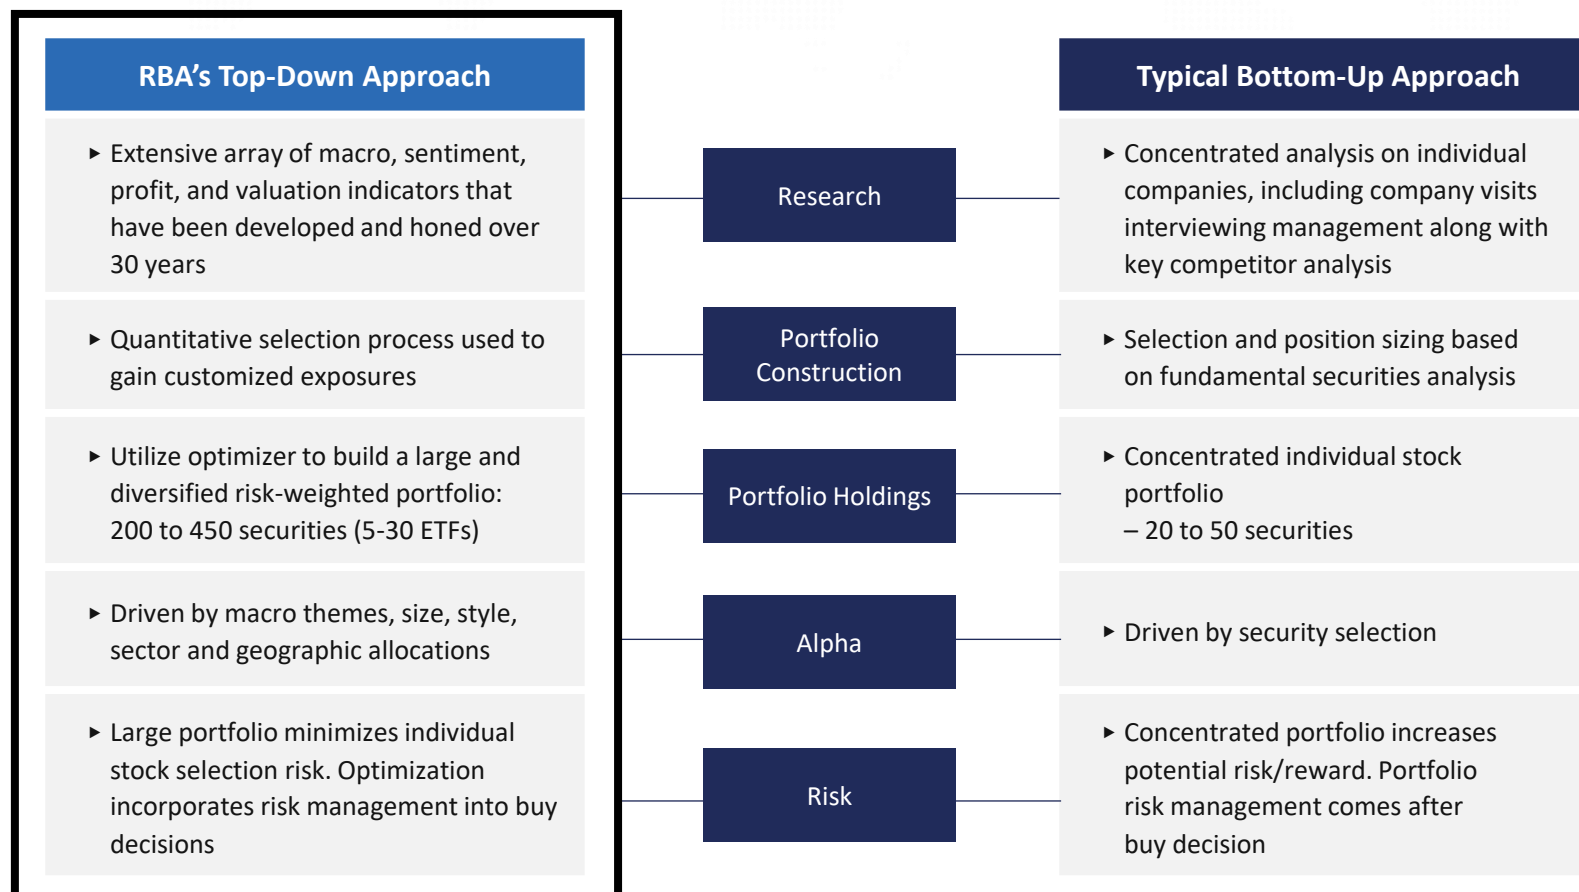

- ▶ RBA has unparalleled experience in equity, fixed income and asset allocation.
- ▶ Utilize in-house macro research to assess profits, liquidity, and sentiment.
- ▶ RBA drives alpha through asset selection, size, style, sector, rating, duration and geography, and not through individual stock selection.
- ▶ History of positioning shows RBA's thinking is non-consensus.
- ▶ Conservative risk-balanced approach to total returns.
- ▶ All mandates are global go-anywhere.

Investment Process

Profit Cycles, Not Economic Cycles, Drive Financial Markets

Go Anywhere SMAs

SMA Portfolio Highlights

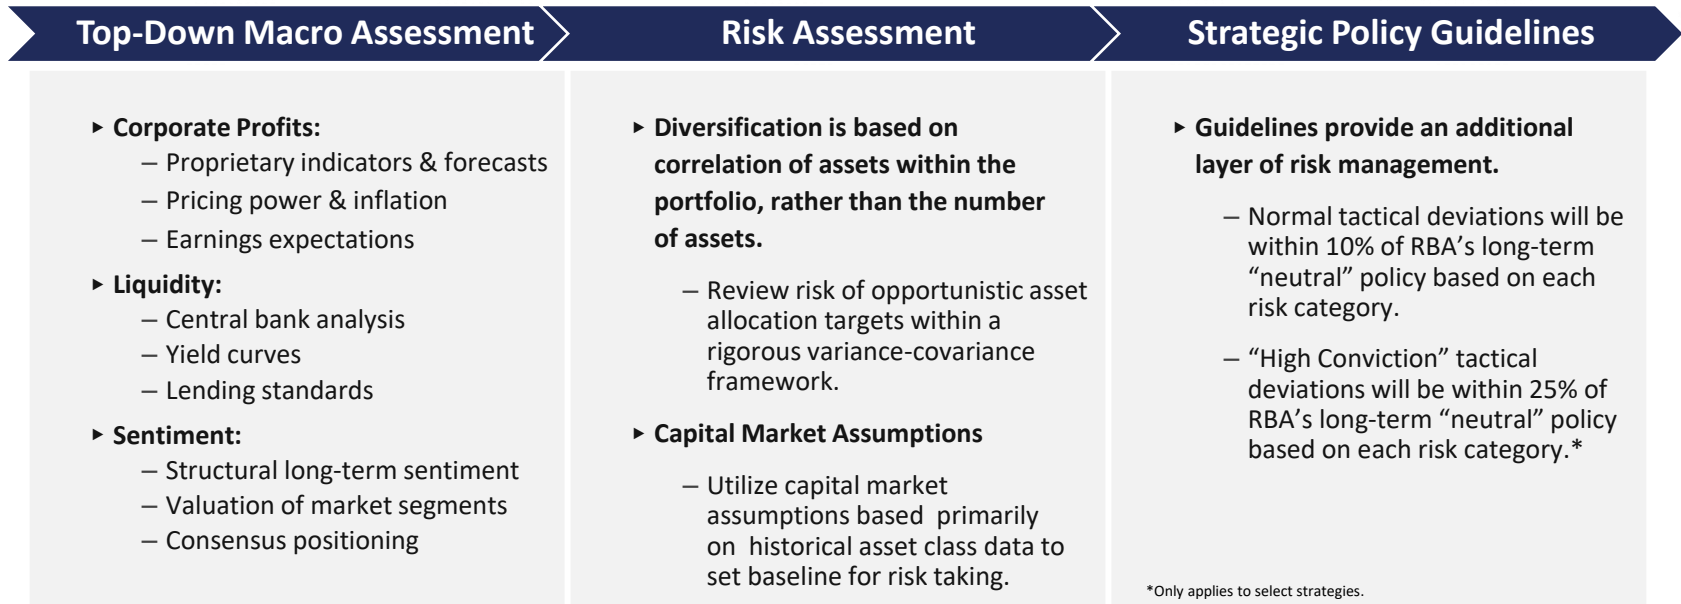

- ▶ “Go-anywhere” ETF based equity and asset allocation strategies that invest across asset classes, geography, and market segments such as size, style, sector, and quality.
- ▶ SMAs seek to maximize total returns across five distinct ETF strategies.
- ▶ Managing within risk parameters will be a focus of our approach.
- ▶ Over time, and under normal market conditions, the portfolios should consistently be invested in a mix of size/style/asset classes to pursue our objective.
- ▶ Strategic policy guidelines are in place to provide an additional layer of risk-management.

Flexible Asset Allocations

Asset Allocation Decisions

Growth vs. Value	Stocks vs. Bonds	High Quality vs. Low Quality
Large vs. Small-cap	Cyclical vs. Defensive Sectors	Long vs. Short Duration
Emerging vs. Developed	Sovereign vs. Corporate Bonds	Commodities

Separately Managed Account ETF Portfolios

ETF Selection & Implementation Process

ETF Portfolio Selection & Construction

Quantitative screening with qualitative review (>1,000 ETF universe)

- ▶ Prefer AUM > \$100 million
- ▶ Prefer trading history > 1 year
- ▶ Liquidity: ETF share volume + underlying basket volume
- ▶ Bid/Ask spread
- ▶ Legal structure
- ▶ Construction methodology
- ▶ Discount / premium to NAV
- ▶ Sponsor reputation and transparency
- ▶ Exposure: fit to targeted market segments: region, style, sector, credit quality, duration, etc.
- ▶ Minimize fees relative to market-segment peers
- ▶ Minimize tracking error relative to market-segment peers

Resulting In

ETF Portfolios

- ▶ Typically 5-30 ETFs
- ▶ Maximize contribution from top-down macro-economic views
- ▶ Minimize portfolio risk through asset class portfolio risk measurement
- ▶ Minimize stock-specific risk through usage of ETFs

RBA Core Plus Total Return ETF Strategy

Strategy Performance (%) as of 9/30/2022

Source: Richard Bernstein Advisors LLC

RBA Core Plus Total Return ETF Strategy composite returns include the reinvestment of dividends and are presented in USD. Gross performance results presented are net of transaction costs, withholding taxes, direct expenses and the fees and expenses of underlying funds, but before advisory fees, custody fees and other indirect expenses.

Net performance numbers are a hypothetical illustration based on a 0.40% annualized advisory fee applied monthly. Net fees do not reflect actual strategy performance and are for illustrative purposes only. Actual account performance may vary.

Inception: 12/23/2020

Past performance is not a guarantee of future results. Please Important Disclosures for additional information regarding the portfolio performance shown and for effects of fees. Management and performance of individual accounts may vary for reasons that include the existence of different implementation practices and requirements in different investment programs.

RBA Core Plus Total Return ETF Strategy

Performance Disclosure

The performance was calculated by Richard Bernstein Advisors LLC (the “Adviser”) for the Core Plus Total Return ETF Strategy (“Strategy”) as described below. The Strategy’s asset allocation recommendations are subject to guideline allocation limitations at the major asset class level (i.e., fixed income and cash) that may change over time.

The Strategy has an inception date of December 23, 2020. The Strategy seeks to generate superior risk-adjusted returns as compared to the aggregate bond universe over a full market cycle by employing a top-down style to construct a global tactical asset allocation portfolio. Accounts in this Strategy obtain desired exposure via ETF vehicles.

The Strategy benchmark is 100% Bloomberg U.S. Aggregate Bond Index. The benchmark is rebalanced daily.

Past performance is no guarantee of future results. Performance is shown in USD and includes reinvestment of dividends and other earnings. Results are shown on a “gross” and “net” basis. Gross-of-fee returns are reduced by actual trading costs incurred and platform fees but are before deduction of any advisory or other fees. Net performance is shown net of a model annual advisory fee of 0.40% deducted on a monthly basis, the highest fee charged by the Adviser. Taxes have not been deducted.

Index and portfolio data herein have been supplied by outside sources, including, Richard Bernstein Advisors LLC, and are believed to be reliable as of the date indicated. The source for ETF returns is Bloomberg. The source for risk measures is Morningstar.

Index Descriptions

The following descriptions, while believed to be accurate, are in some cases abbreviated versions of more detailed or comprehensive definitions available from the sponsors or originators of the respective indices. Anyone interested in such further details is free to consult each such sponsor's or originator's website.

Past performance of an index is no guarantee of future results. Unless otherwise stated, index returns do not reflect the effect of any applicable sales charges, commissions, expenses, taxes or leverage, as applicable. It is not possible to invest directly in an index. Historical performance of the index illustrates market trends and does not represent the past or future performance of the models.

Each index reflects an unmanaged universe of securities without any deduction for advisory fees or other expenses that would reduce actual returns, as well as the reinvestment of all income and dividends. An actual investment in the securities included in the index would require an investor to incur transaction costs, which would lower the performance results. **Indices are not actively managed and investors cannot invest directly in an index.**

US Fixed Income: Bloomberg U.S. Aggregate Index: An unmanaged index that tracks domestic investment-grade bonds, including corporate, government, and mortgage-backed securities.

Investments in foreign instruments or currencies can involve greater risk and volatility than U.S. investments because of adverse market, economic, political, regulatory, geopolitical or other conditions. In emerging countries, these risks may be more significant. The value of commodities investments will generally be affected by overall market movements and factors specific to a particular industry or commodity, including weather, embargoes, tariffs, or health, political, international and regulatory developments. An imbalance in supply and demand in the income market may result in valuation uncertainties and greater volatility, less liquidity, widening credit spreads and a lack of price transparency in the market. As interest rates rise, the value of certain income investments is likely to decline. Investments in income securities may be affected by changes in the creditworthiness of the issuer and are subject to the risk of non-payment of principal and interest. The value of income securities also may decline because of real or perceived concerns about the issuer's ability to make principal and interest payments. Smaller companies are generally subject to greater price fluctuations, limited liquidity, higher transaction costs and higher investment risk than larger, established companies. Derivatives instruments can be used to take both long and short positions, be highly volatile, result in economic leverage (which can magnify losses), and involve risks in addition to the risks of the underlying instrument on which the derivative is based, such as counterparty, correlation and liquidity risk. If a counterparty is unable to honor its commitments, the value may decline and/or the portfolio could experience delays in the return of collateral or other assets held by the counterparty.

The views expressed in this presentation are those of (portfolio manager/team) and are current only through the date stated and are not intended as investment advice or a recommendation to purchase or sell specific securities. These opinions may change at any time without notice, and there is no assurance that any securities discussed herein will remain in an account at the time you receive this report. While every effort has been made to verify the information contained herein, we make no representations as to its accuracy. It should not be assumed that any of the securities or transactions listed were or will be profitable. Actual portfolio holdings will vary for each client, and there is no guarantee that a particular client's account will hold any or all of the securities mentioned. It is not possible to invest directly in an Index.

This material may contain statements that are not historical facts, referred to as forward-looking statements. Future results may differ significantly from those stated in forward-looking statements, depending on factors such as changes in securities or financial markets or general economic conditions.
